

Malik Lomax

OPERATIONS ANALYST · LOGISTICS & SUPPLY CHAIN · SQL & DATA MANAGEMENT

Beaver Falls, Pennsylvania, United States maliklomax261@gmail.com maliklomax.me linkedin.com/in/maliklomax

PROFESSIONAL SUMMARY

20 years in the trenches of high-volume logistics and warehouse operations — now bringing floor-level expertise to the data side of the table. Spent two decades where the spreadsheet meets reality: managing inventory discrepancies, tracking shipments, and solving problems no dashboard fully captures. Applies SQL, database management, and data analytics to inventory reconciliation, WMS/ERP data integrity, and operational reporting. I don't just analyze data — I know what it means when the numbers don't match the warehouse floor. Completing B.A.Sc. in Information Technology (Data Management) at Strayer University (Jun 2027, GPA 3.5) · AWS Certified Cloud Practitioner.

EXPERIENCE

Logistics Operations & Systems Specialist

Oct 2023 – Present

Freelance · Self-employed · Beaver Falls, PA · Hybrid

- Developed automated SQL audit workflows that reduced manual inventory reconciliation time by identifying and logging recurring discrepancy patterns.
- Built audit workflows that trace discrepancy origin, log corrections, and surface recurring issues for corrective action.
- Mapped ERP/WMS data flows to operational processes to ensure queries reflect real-world material movement and staging.
- Supported short-term projects focused on inventory reconciliation, shipment verification, and operational data hygiene.

Logistics Operations Associate

Mar 2016 – Dec 2023

TrueBlue · Full-time · Pittsburgh, PA · On-site

- Tracked incoming and outgoing shipments and verified counts/conditions against documentation for high-volume shifts handling 3,500+ units per day.
- Identified and resolved physical-to-system discrepancies (mislabels, short shipments, receiving errors) before they impacted downstream operations.
- Served as a floor reference for inventory accuracy and led ad-hoc investigations that prevented shipment errors and reduced rework.
- Supported quality checkpoints and material staging to maintain strict turnaround and on-time delivery targets.

Warehouse & Fulfillment Operations

Earlier career

Contract site assignments · Southwestern PA

- Additional years in warehouse operations prior to documented placements above (20 years logistics total).
- Inbound, outbound, pick/pack, sortation, and inventory control in high-volume fulfillment environments.
- Floor-level discrepancy resolution and cycle-count support that built the foundation for later systems and data work.

PROJECTS

Warehouse Inventory Integrity Audit System

SQL-based inventory reconciliation · [Case study](#) →

- Built Inventory and Audit tables with automated database triggers that log every inventory change — no manual entry required.
- Uses SQL JOIN to compare system records against physical counts, flagging discrepancies by item, location, and variance amount.
- Designed to reduce shipment errors, prevent inventory-related delays, and improve data accuracy in logistics operations.

EDUCATION

B.A.Sc., Information Technology (Data Management)

Strayer University · Jul 2023 – Jun 2027 · GPA 3.5

Activities: IT Student Ambassador, Data Analytics Club, Network Security Workshop. Coursework: Database Design, SQL, Data Management Systems, Cybersecurity, Python, Web Development, IT Infrastructure, Project Management.
